

Built Heritage Management: Energy & Society

Submission deadline: February 2019

A Special Issue of International Journal of Building Pathology and Adaptation

Contemporary challenges in conserving built cultural heritage

Guest Editors:

Dr. Eric Lou, Manchester Metropolitan University, e.lou@mmu.ac.uk

Dr Paul Chan, University of Manchester, paul.chan@manchester.ac.uk

Dr Noraini Hamzah, Universiti Kebangsaan Malaysia, ainhamzah@ukm.edu.my

The International Journal of Building Pathology and Adaptation focuses on the challenges associated with the adaptation of existing buildings in response to rapid technological developments, a changing climate and developing societal demands. This of course is in the context of an increasingly global society and a construction sector where solutions need to be developed that are internationally rigorous and informed by world class research.

Submit your research now!

Heritage is the reflection of our past for our future - a fundamental aspect underpinning any country's national identity. Heritage buildings, not new, hold this strategic role. The impact of climate change and sustainable living will revolutionise cities as we see it today. Heritage buildings must be conserved with sustainability in mind. Unique traditional designs, localised materials and micro-climates are leading factors in its refurbishment thinking, practices and process.

Indicative list of anticipated themes:

- Refurbishment/retrofit for built heritage
- Heritage refurbishment assessment schemes
- Built heritage energy conservation/preservation
- Sustainability-led design for built heritage
- Embodied energy of local materials
- Heritage stakeholder management
- Value of Heritage (communities)
